# ILVA Unveils New Scratch Resistance Wood Coatings Line

12.06.17

IVM Group's ILVA brand earlier this month at Architect@Work2017 unveiled its new Scratch Resistance wood coatings.

The clear and pigmented polyurethane finishes range are available in any color, both for industrial and crafts solutions, and created to guarantee surfaces with excellent resistance to scratching and polishing similar to the resistance of such materials as laminates.

The Scratch Resistance wood coating range, offers an alternative to the use of laminated materials. In comparison, the use of coating makes it possible to construct flat and contoured sections and offers an unmatched versatility. The ILVA Laboratories have developed innovative formulations that ensure perfect gloss over the entire surface, which remains unchanged including in case of high stress.

The new Scratch Resistance wood coatings are manufactured in the Plant of Parona, Pavia area.
